

Remote Diagnostic and Analytical Services (OnLook™)

Remote Diagnostic and Analytical Services (OnLook™) help keep your turbomachinery running and efficient — no matter where your plant is

The Industrial Internet of Things (IIoT) enables you to rely on turbomachinery experts remotely for the service and support of your complex control systems. CCC provides the expert analysis needed to optimize control and perform preventative maintenance to ensure your plant stays running longer with reduced maintenance costs. As highlighted in the “Plant Engineer’s Handbook”, predictive maintenance practices can have significant business impacts including:

- Maintenance costs reduced by up to 50%
- Unexpected failures reduced by up to 55%
- Uptime increased by up to 30%
- Mean time between failures (MTBF) of machinery increased by up to 30%

Remote Diagnostic and Analytical Services (OnLook™)

From routine check-ups to assistance in emergency situations, CCC engineering services are always available with 24/7 secure support network

EMERGENCY

Be ready when the unexpected happens

- ▶ Emergency assistance
- ▶ Root cause analysis
- ▶ Remote system tune-up and configuration

DIAGNOSTICS

Stay on top of control system health

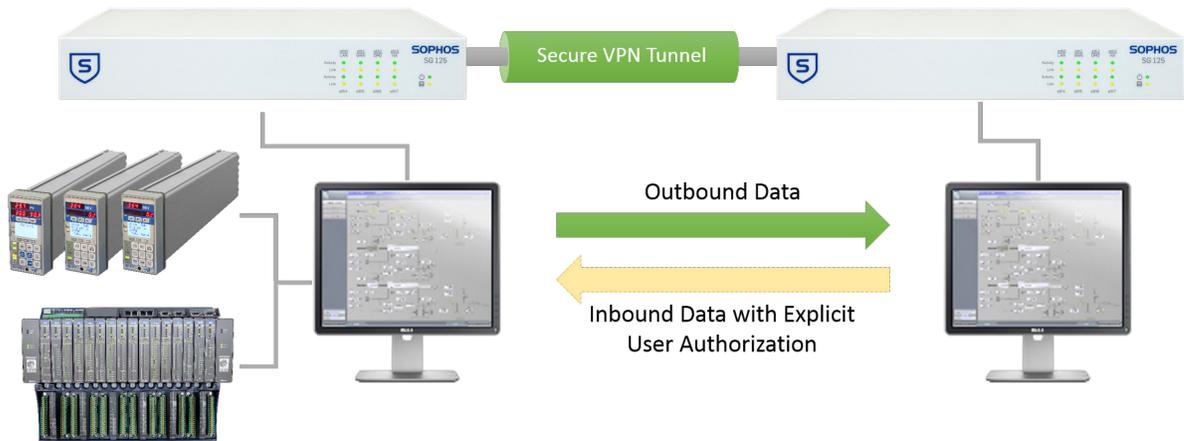

- ▶ System health check
- ▶ Review of alarms, events, and process trends

MAINTENANCE

Improve system performance & availability

- ▶ Review of control element performance
- ▶ Configuration check
- ▶ System backup
